Practical Title : Login/Logout with Sessions, Role-Based Access, Timeout, and Remember-Me Token

Problem Definition: Develop secure login and logout functionality using PHP sessions. Verify password using password_verify(), regenerate session ID after login, restrict dashboard access, implement role-based redirection, session timeout, and optional secure remember-me token.

Theory

1. **Are sessions started and destroyed securely?**
   Answer: Sessions are started securely using session_start() and destroyed properly during logout.

2. **Is password_verify() used correctly?**
   Answer: password_verify() is used to verify the entered password against the stored hashed password.

3. **Is unauthorized dashboard access blocked?**
   Answer: Unauthorized dashboard access is blocked using session authentication checks.

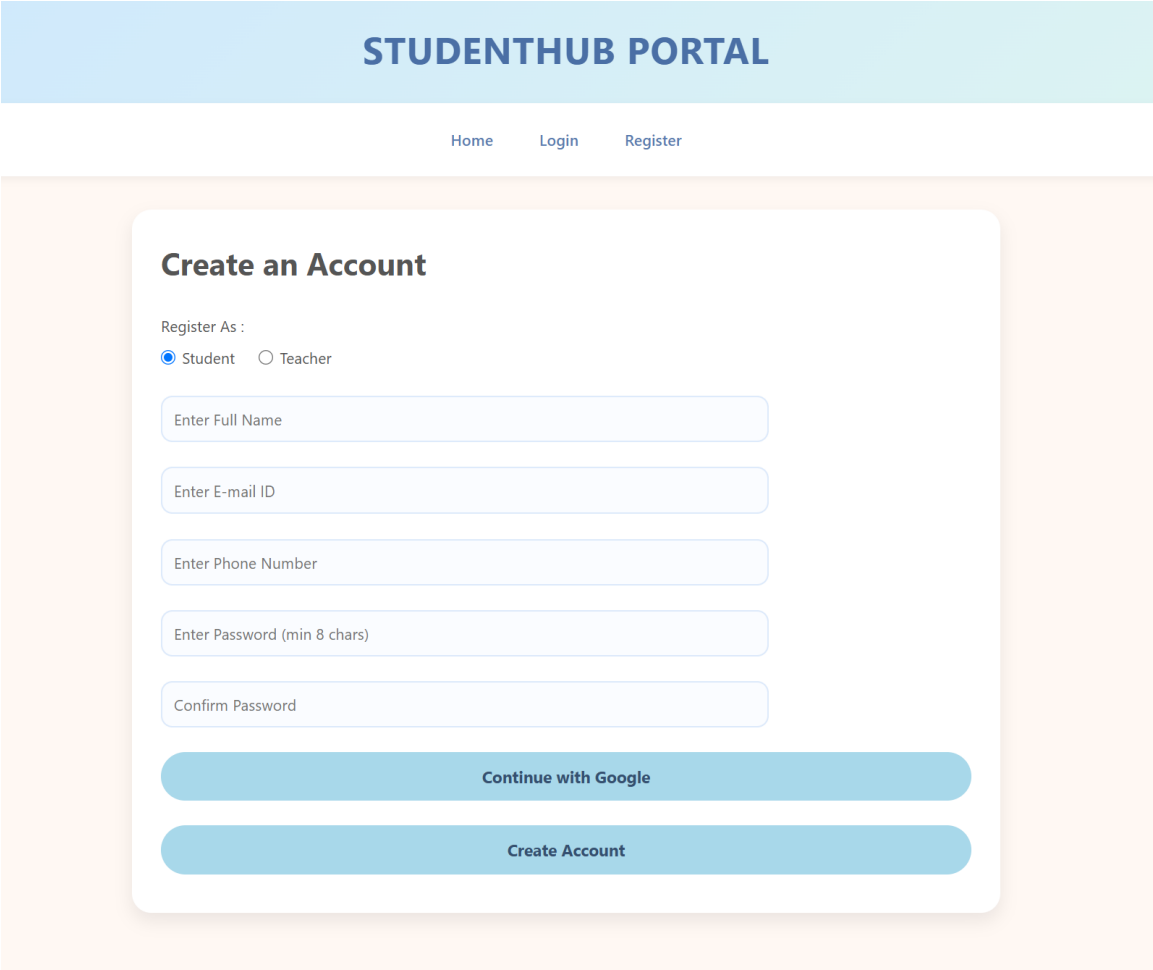

4. **Is session timeout implemented?**
   Answer: Session timeout is implemented to automatically log out inactive users.

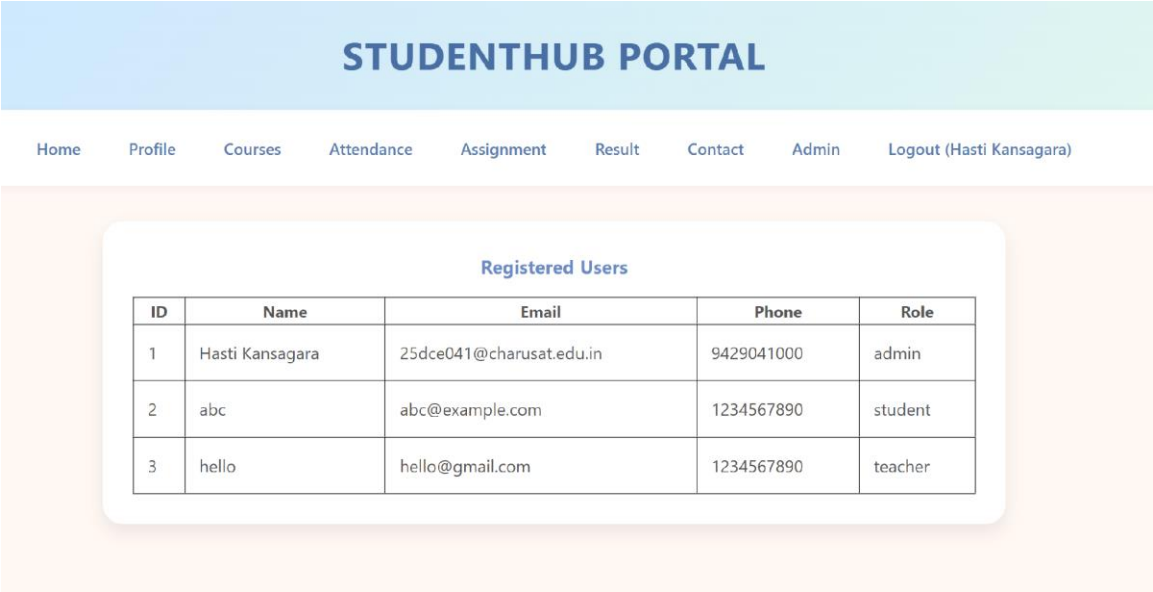

5. **Are admin and student users redirected to appropriate dashboards?**
   Answer: Admin and student users are redirected to their respective dashboards based on their roles.

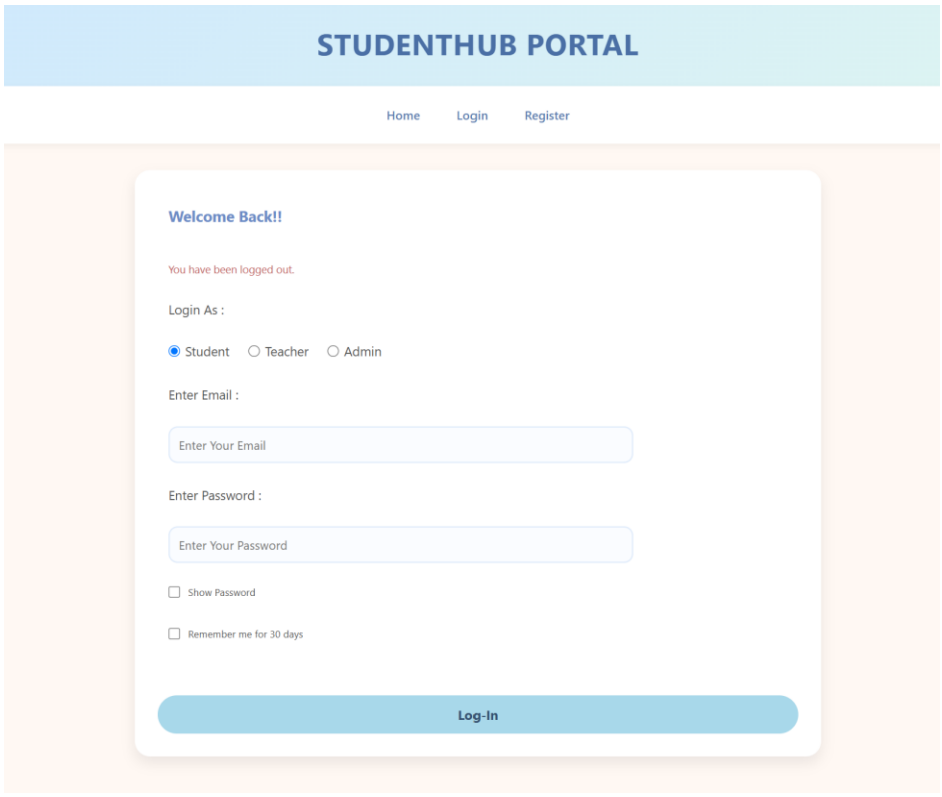

Implementation :

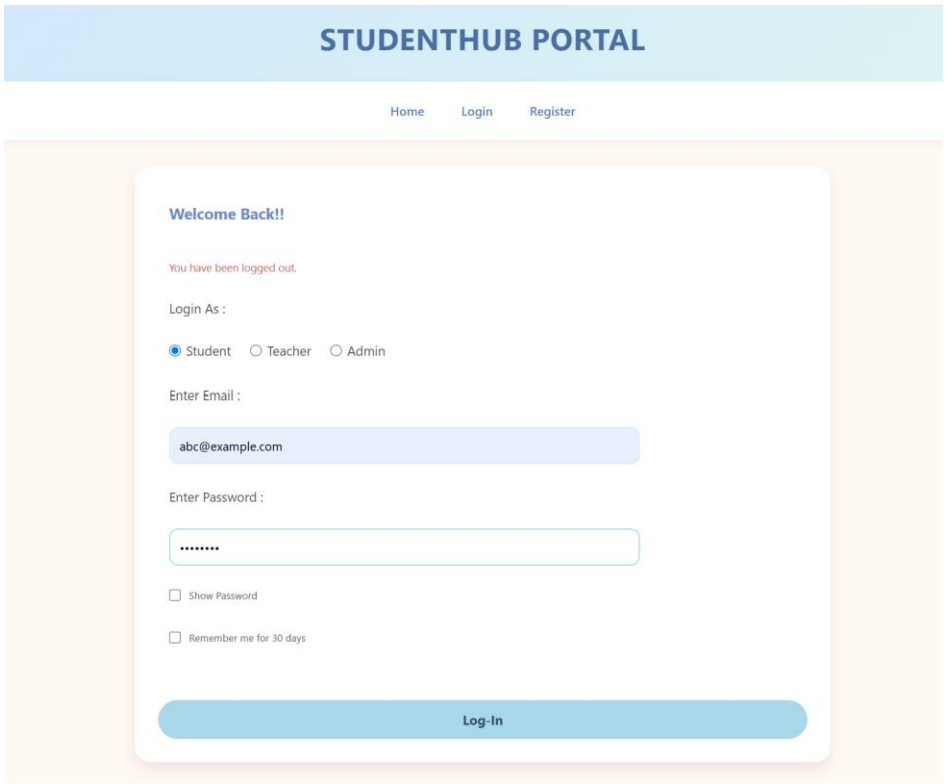

- Started secure PHP sessions using session_start().
- Verified passwords using password_verify().
- Regenerated the session ID after successful login using session_regenerate_id.
- Restricted dashboard access using session authentication checks.
- Implemented session timeout to automatically log out inactive users.
- Added role-based redirection for admin and student dashboards.
- Destroyed the session and logged out the user securely.

C. Challenges Faced:

- Managing PHP sessions securely during login and logout.
- Verifying hashed passwords correctly using `password_verify()`.
- Preventing unauthorized users from accessing the dashboard.
- Implementing session timeout for inactive users.

D. Learning Outcomes:

- Learned to implement secure login and logout using PHP sessions.
- Understood password verification using `password_verify()`.
- Learned to protect dashboards from unauthorized access.
- Understood how to implement session timeout for inactive users.
