Practical Title : Student Management CRUD with Search and Filter

Problem Definition: Create a student management module to add, view, edit, delete, search and filter student records. All database operations must use MYSQLi statements and clear success/failure messages.

Theory

1. **Are SELECT, INSERT, UPDATE, and DELETE operations working?**
   Answer: SELECT, INSERT, UPDATE, and DELETE operations are implemented to manage student records in the database.

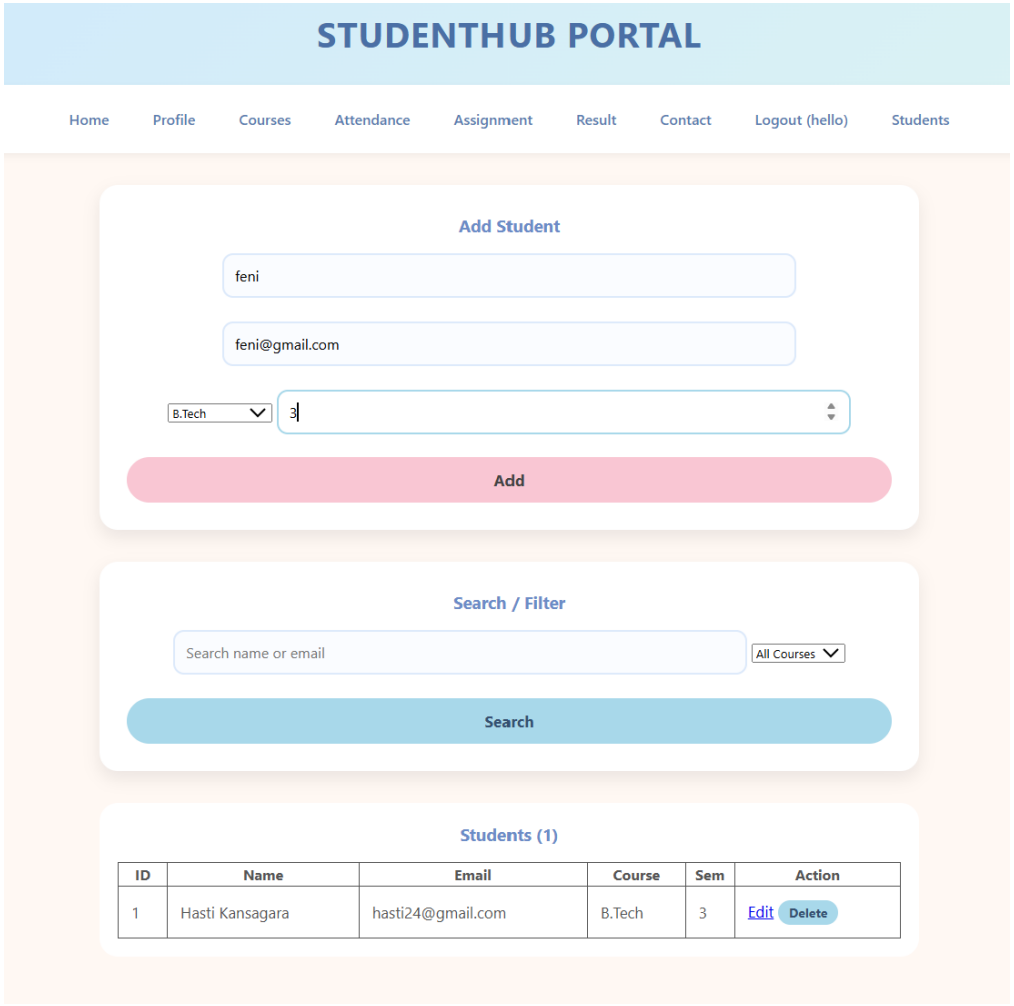

2. **Is search by name/email/course implemented?**
   Answer: Search functionality is implemented to find records by name, email, or course.

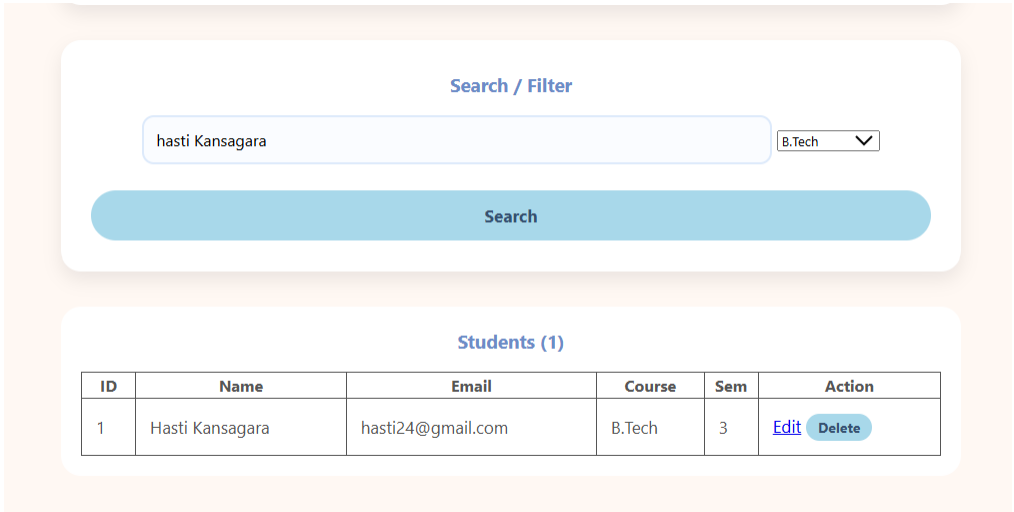

3. **Are delete operations confirmed before execution?**
   Answer: Delete operations require user confirmation before permanently removing a record.

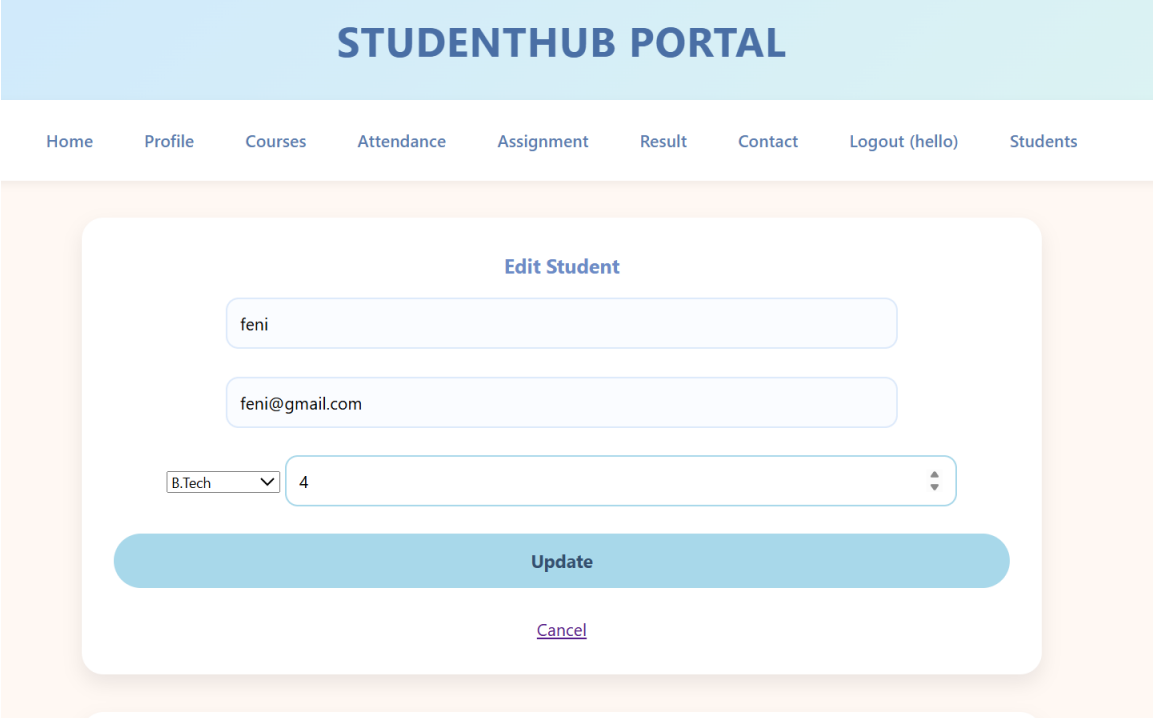

Implementation :

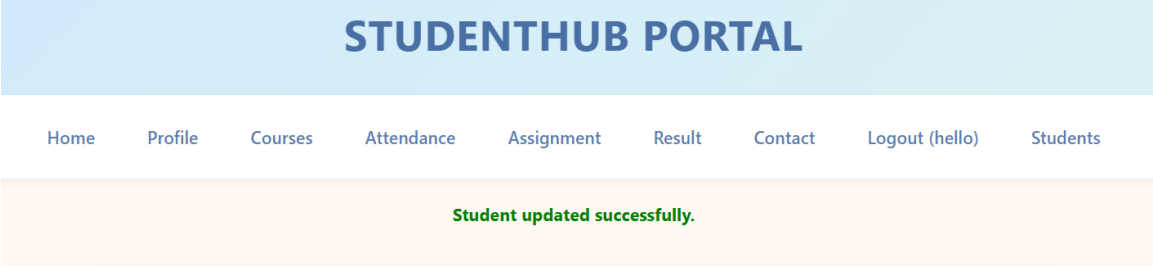

- Implemented SELECT to display student records from the MySQL database.
- Used INSERT to add new student records.
- Used UPDATE to modify existing student details.
- Used DELETE to remove student records from the database.
- Added search functionality to find students by name, email, or course.
- Added a confirmation message before deleting any student record.

B. GitHub Repository Link:

https://github.com/25dce049-ui/student-hub

C. Challenges Faced:

- Establishing a proper connection between PHP and the MySQL database.
- Implementing SELECT, INSERT, UPDATE, and DELETE operations correctly.
- Developing search functionality for name, email, and course.
- Handling user input and validating student records.
- Adding delete confirmation to prevent accidental data loss.

D. Learning Outcomes:

- Learned to perform CRUD operations using PHP and MySQL.
- Understood how to insert, retrieve, update, and delete student records.
- Learned to implement search functionality by name, email, and course.
- Gained knowledge of input validation and database management.
- Understood how to use delete confirmation to prevent accidental data loss.

Faculty Remarks: **(Keep this blank for faculty)**
