Practical Title : Admin Dashboard with Role-Based Access Control, Dynamic Menu, and Audit Log

Problem Definition: Develop an admin dashboard that displays user statistics, student count, event count and latest registrations. Restrict access to admin users only and show dynamic menu options based on role.

Theory

1. **Are dashboard values loaded dynamically from the database?**
   Answer: Dashboard values are loaded dynamically from the MySQL database.

2. **Is access restricted to admin users?**
   Answer: Access to the admin dashboard is restricted to authenticated admin users.

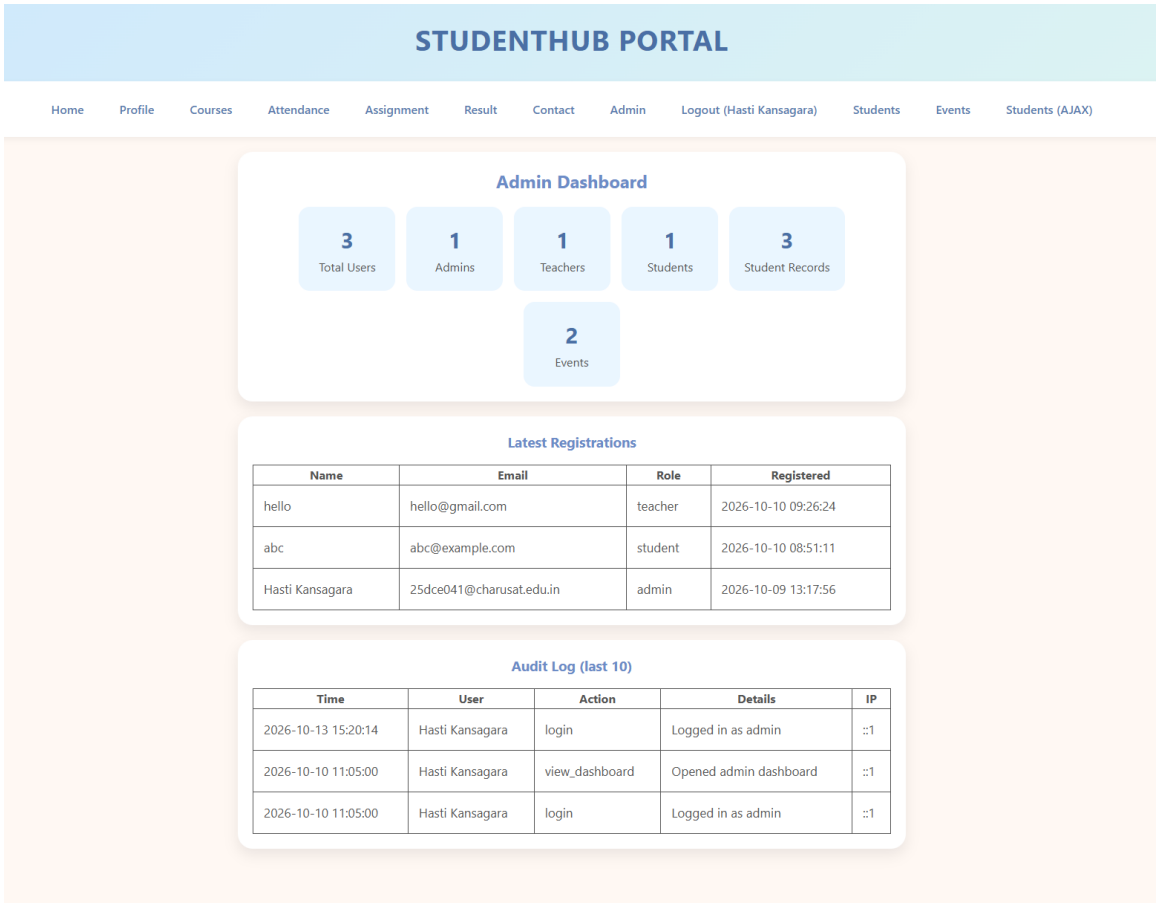

3. **Are role-based menus working?**
   Answer: Role-based menus display appropriate options for admin and student users.

4. **Are important admin actions recorded in audit_logs?**
   Answer: Important admin actions, such as adding, updating, and deleting student records, are recorded in the audit_logs table.

Implementation :

- Loaded dashboard values dynamically from the MySQL database.
- Restricted admin dashboard access to authenticated admin users.
- Implemented role-based menus for admin and student users.
- Recorded important admin actions, such as adding, updating, and deleting student records, in the `audit_logs` table.
- Displayed dashboard information and management options according to user roles.

A. Evidence of Work (Screenshots)

	id	user_id	action	details	ip	created_at
Edit Copy Delete	1	1	login	Logged in as admin	::1	2026-10-10 11:05:00
Edit Copy Delete	2	1	view_dashboard	Opened admin dashboard	::1	2026-10-10 11:05:00
Edit Copy Delete	3	1	login	Logged in as admin	::1	2026-10-13 15:20:14
Edit Copy Delete	4	1	view_dashboard	Opened admin dashboard	::1	2026-10-13 15:20:14

B. GitHub Repository Link:

https://github.com/25dce049-ui/student-hub

C. Challenges Faced:

- Fetching and displaying dashboard statistics dynamically from the database.
- Restricting dashboard access based on user roles.

- Implementing role-based menus correctly.
- Recording admin activities in the `audit_logs` table.
- Maintaining consistency between database records and audit logs.

D. Learning Outcomes:

- Learned to create dynamic admin dashboards using PHP and MySQL.
- Understood role-based access control and dashboard security.
- Learned to display menus according to user roles.
- Gained knowledge of audit logging to track admin activities.
- Improved understanding of database integration, security, and activity monitoring.
